This document is for sophisticated investors' use only, and must not be distributed to retail investors.

Fund Objective

The Fund aims to provide long-term capital growth with a focus on absolute return and diversification across multiple asset classes and geographical regions.

The goal is to achieve high risk-adjusted absolute returns through a strategic asset allocation framework by replicating a US university endowment model, while also protecting capital and profit from equity bear markets through dynamic asset allocation; hence targeting risk-adjusted absolute returns superior to a traditional long-only equity fund or a 60/40 balanced fund over a market cycle.

The firm's investment philosophy is to apply real-world discretionary trading strategies to the rigour of a quantitative process focusing on delivering superior risk-adjusted absolute returns.

Fund Performance

Fund Information

Asset Class Allocation

Fund Commentary

The Fund returned -4.94% for the month. The reference portfolio or benchmark was -4.15% for the month. The Fund's monthly correlation to equities (SPY) is 0.32.

Our [strategic asset allocation framework](#), replicates the US university endowment model by investing in a diversified portfolio of multiple asset classes (ie. Private Equity replication, Absolute Returns, Precious Metals, Natural Resources, Real Estate and Infrastructure Assets, US and Global Equities (ex-US), Government Bonds and Corporate Bonds) using liquid, exchanged listed ETFs. Highlights of the **gross attribution** for the month was positive attribution from hedging or short exposures in US Equity asset class of +0.99%. Exposures in the other asset classes resulted in negative attribution led by Precious Metals, Global Equity (ex US), Absolute Return, Natural Resources, Government Bonds and Corporate Bonds which delivered negative attribution of -1.79%, -0.83%, -0.78%, -0.78%, -0.56% and -0.45% respectively.

We adopt [dynamic asset allocation](#) to adapt and adjust asset class allocations; highlights of our **asset class exposures at month end** include net long exposure in Private Equity Replication, Global Equity (ex US), Government Bonds and Corporate Bonds representing +6.35%, +5.79%, +5.68% and +5.13% respectively. Long exposures in Precious Metals closed lower at 1.27%. Our long exposures are hedged by net short exposure in the US Equity asset class representing -64.65%.

[Disciplined risk management](#) is a key objective of the Fund. **Risk exposures** closed lower in the month with gross exposure at 158.31% (comprising long exposure of 61.71% plus short exposure of 96.60%) versus 245.75% last month. Net exposure closed the month higher at -34.89% (comprising long exposure of 61.71% minus short exposure of 96.60%) and net beta adjusted exposure closed the month higher at -37.32% versus +23.20% last month. Value at Risk (VAR) using 95% confidence level closed the month at 2.68% i.e. 95% confident that the worst daily loss will not exceed 2.68%. We employ a combination of both a systematic and discretionary approach to risk management aiming to reduce risk during periods of (1) higher volatility and (2) drawdowns in the NAV of the Fund. Our model as increased our systematic risk reduction to 30% from 25% in the previous month.

We continue to focus on a hybrid approach of discretionary fundamental investing and systematic investing emphasizing data-driven insights, scientific testing, and disciplined portfolio construction techniques.
