Fund Objective

The Fund aims to provide long-term capital growth with a focus on absolute return and diversification across multiple asset classes and geographical regions.

The goal is to achieve high risk-adjusted absolute returns through a strategic asset allocation framework by replicating a US university endowment model, while also protecting capital and profit from equity bear markets through dynamic asset allocation; hence targeting risk-adjusted absolute returns superior to a traditional long-only equity fund or a 60/40 balanced fund over a market cycle.

The firm's investment philosophy is to apply real-world discretionary trading strategies to the rigour of a quantitative process focusing on delivering superior risk-adjusted absolute returns.

Asset Class Allocation

Fund Commentary

The Fund returned 2.06% for the month. The reference portfolio or benchmark was -3.0% for the month. The Fund's monthly correlation to equities (SPY) is 0.35.

Our [strategic asset allocation framework](#) replicates the US university endowment model by investing in a diversified portfolio of multiple asset classes (i.e., Private Equity replication, Absolute Returns, Precious Metals, Natural Resources, Real Estate and Infrastructure Assets, US and Global Equities (ex-US), Government Bonds and Corporate Bonds) using liquid, exchanged listed ETFs. The highlight of the **gross attribution** for the month was positive attribution from long exposures in the Precious Metals, U.S. Equity, and Absolute Returns of 1.22%, 0.32%, and 0.29%. Exposures in the other asset classes resulted in negative attribution led by Government Bonds, Global Equity (ex. U.S.), and Corporate Bonds which delivered negative attribution of -0.21%, -0.15%, and -0.13% respectively.

We adopt [dynamic asset allocation](#) to adapt and adjust asset class allocations; highlights of our **asset class exposures at month end** include net long exposure in Global Equity (ex. U.S.), Precious Metals, Absolute Returns, and Private Equity Replication representing 29.47%, 15.42%, 13.87%, and 10.8% respectively. Long exposures in Corporate Bonds closed same as previous month at 9.26%.

[Disciplined risk management](#) is a key objective of the Fund. **Risk exposures** closed higher in the month with gross exposure at 128.78% (comprising long exposure of 110.99% plus short exposure of 17.79%) versus 67.40% last month. Net exposure closed the month higher at 93.20% (comprising long exposure of 110.99% minus short exposure of 17.79%) and net beta adjusted exposure closed the month higher at 145.51% versus 33.95% last month. Value at Risk (VAR) using 95% confidence level closed the month at 0.90% i.e., 95% confident that the worst daily loss will not exceed 0.90%. We employ a combination of both a systematic and discretionary approach to risk management aiming to reduce risk during periods of (1) higher volatility and (2) drawdowns in the NAV of the Fund. Our systematic risk reduction remained at -30.0%.

We continue to focus on a hybrid approach of discretionary fundamental investing and systematic investing emphasizing data-driven insights, scientific testing, and disciplined portfolio construction techniques.
